Introduction

The Homeless Service Providers Survey is a “*point-in-time enumeration*” completed by service providers semiannually on a predetermined day. The purpose of the survey is to gather demographic information on the homeless who receive services from particular homeless agencies at “any given point in time.”

The Homeless Service Providers Survey defines homelessness based on standard established by the Department of Housing and Urban Development and the Alaska Housing Finance Corporation. For the purposes of this survey, the definition of “homeless” includes:

- *Any individual who lacks a fixed, regular, and adequate nighttime residence or has a primary nighttime residence in any facility not designed for permanent living.*
- *Families, individuals, and youth residing in emergency shelter or transitional housing.*
- *Persons in drug and alcohol treatment who were homeless before they entered treatment or will be homeless after they leave treatment.*
- *Family members wait-listed for public housing that are currently residing in substandard or overcrowded housing.*
- *Individuals discharged from correctional institutions within 30 days of the survey date that would meet the definition of being homeless.*

Key Points

State of Alaska

- The survey was mailed to 128 agencies throughout the State, with 61 of the surveys returned.
- The number of homeless grew slightly, from a moving average of 1,339 to 1,352.
- The percentage of Alaska Natives among the homeless continues to decline, from a high of 43% in July 2000 to 39% in July 2003.
- Approximately 22% of the homeless surveyed have also been reported in prior year's surveys 1995 - 2002
- Families (Adult and Youth) comprise approximately 30% of all households sampled. However families represent approximately 50% of all cases reported, including individuals and family members.
- Thirty-one percent of the homeless report having a disability, however, with 10% of the cases having an unknown disability disposition, this number is likely higher.

Over the last five years, the percentage of homeless reported under 18 has dropped by 4%, while the percentage aged 18-24 has risen by 5%.

Anchorage

- The majority of homeless in Anchorage, 29%, are aged 35 to 44.
- The percentage of homeless with one or more disability has remained relatively unchanged at 32%. Of those who reported a disability 21% disclosed mental illness, 14% physical disability, and 7% developmental disability.
- The representation of Veterans in Anchorage has remained unchanged over the last year, at 17%
- Thrity-six percent of Anchorage's reported homeless reported a substance abuse problem - this percentage has stayed relatively stable over the last two years.
- The percentage of Anchorage's homeless with a dual diagnosis has remained stable at 17% over the last six years.
- Reports of violence by the homeless have risen - now at 14% from 9% in 1999.

Key Points

Rest of State

- Forty-three percent of the surveys mailed to areas outside of Anchorage were returned
- Forty-one percent of the cases outside of Anchorage reported being “doubled-up” or residing in substandard living arrangements.
- The City of Juneau (169) recorded the highest number of homeless outside of Anchorage, followed by Fairbanks (86) and Bethel (83).
- Seventy-four percent of the “rest of state” homeless cases were individuals.
- A little more than a quarter (26%) of the cases reported one or more disability. Six percent reported a developmental disability; 16% - mental illness and 11% developmental disability.
- The race representation of homeless outside Anchorage remains predominately Alaska Native, 43.2%, and White, 42.4%.
- A slight increase in the number of victims of violence was recorded. Since the Summer of 2000, this figure has risen from 8 to 11%.

Limitations

Please note that homeless surveys attempt to define a segment of the population that is dynamic and not easily identified or understood. There are many factors that generally limit the validity of such studies. Users of homeless surveys need to carefully examine the work done and consider the following limitations of all homeless research. **The results of the survey are not intended to represent the entire homeless population and the reader is cautioned against making such generalizations.** Please note that the results of this survey, as well as other homeless surveys, are generally limited by a variety of factors including:

1) Self-report:

Homeless surveys depend on self-disclosure and assume that people understand what it means to be homeless and furthermore, that people are comfortable in reporting self-characteristics that may be perceived as socially undesirable, such as mental illness or substance abuse.

2) Overestimation

Homeless surveys can overcount the number of homeless seeking services by not considering or controlling for duplication within and across agencies. This survey attempts to control for overestimation by removing, when possible, duplicates. Duplicates are identified using social security number, client name, community, age, and gender. When these variables are incomplete or not available, additional variables may be used to identify duplicates.

3) Generalizing to the Entire Homeless Population

Homeless surveys often attempt to make generalizations about the entire population from limited samples of shelters and food kitchens. It is important to note that homeless may also be found in motels, libraries, cars, parks, or other nontraditional locations.

4) Rural Factors

It is important to point out that there are pronounced differences between urban and rural areas when it comes to homelessness. While urban communities often have shelters, day centers, and food kitchens for the homeless, rural communities may lack these facilities. The absence of these facilities can result in reports which may incorrectly conclude that rural areas do not have a homeless problem. A rural community often relies on non-traditional shelter arrangements to take care of the homeless. Many persons in rural areas without a home may board with friends or relatives in substandard or overcrowded housing.

Method

Data Collection

Twice a year, surveys are mailed to 138 homeless agencies throughout the State of Alaska. Agencies are asked to report on the demographics on all the homeless families and individuals who request services on the date of the survey, including those who are ineligible to receive services and those who cannot be served because of capacity issues. For the past two years, the survey has been administered on the last Wednesday of July and January. Note that in some cases, agencies submit homeless client data not collected on the required survey dates. These data are generally not included with the results of the survey unless it can be concluded with a reasonable amount of certainty that the cases reported were homeless on the required survey dates. Agencies may also submit client data where there is some question as to whether or not the reported individuals or families are actually homeless. In these circumstances, agencies are contacted to clarify if the cases meet the survey's definition of homeless.

Data Analysis

Data gathered from homeless agencies are entered into a database and subjected to a missing case and duplicate analysis. **Missing cases are generally excluded from demographic trends and patterns reported in this report. Duplicates across homeless agencies for the specific survey are excluded** and also excluded from the trends and patterns reported in this survey. However, duplicates with prior surveys are included and analyzed to identify the differences between infrequent users of homeless services vs. frequent users.

Data collected over the last seven years indicate fundamental differences between Winter and Summer surveys with respect to agency participation and the demographics of the homeless reported. Because of these factors, Winter survey trends are derived only from Winter survey data whereas Summer survey trends are derived only from Summer survey data.

The constantly changing nature of homeless agency participation in the Homeless Service Providers' Survey results in demographic statistics that are extremely variable. This is especially the case in rural Alaska where just one agency can significantly change the demographic profile of the homeless. Because of this, percentages are calculated by averaging all available data points. This approach, a moving average, provide a clearer picture of the long-term trends in the homeless population from which inferences can be made.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once.
- Without individual demographic data on each household member, duplicates cannot be ruled out.
- Includes Winter Surveys Only
- Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
- Includes Winter Surveys Only
- Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.

- Notes:
- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
 - Cases for which demographic variable is unknown, excluded from percentage calculations.
 - Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
 - Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
 - Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
 - Includes Winter Surveys Only
 - Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.
